Home Assignment (May, 2020)

Sem VI, Arts

Economics (Major)

Marks: 15

Paper: 602, Applied Statistics.

Answer The following questions:

- (1) Consider The linear trend equation $Y = a + bt$. The method of least squares give The following two normal equations

$$\sum Y = na + b \sum t$$

$$\sum Y.t = a \sum t + b \sum t^2$$

Use these equations to obtain The estimates of a and b .
Use The following data.

Year:	1968	1969	1970	1971	1972	1973	1974	1975
Production: ('000 quintals)	80	90	92	83	94	99	92	110

Estimate The production for 1976.

(5)

- (2) Construct index numbers of price from The following data by applying

(1) Laspeyres's Method (2) Paasche's Method (3) Fisher's Ideal Index.

Commodity	2010		2014	
	Price	Quantity	Price	Quantity
A	20	8	40	6
B	50	10	60	5
C	40	15	50	15
D	20	20	20	25
